Release Notes

Hub 5.0.1 – January 2024

This release note is for the 5.0.1 release of Blue Prism Hub.

 SS&C | Blue Prism Hub 5.0 is only available in Blue Prism Cloud – it is not available as an on-premises solution. Please refer to the [roadmap](#) for more information on the planned versions of the Blue Prism Hub platform and the plugins.

Known issues

A list of any prominent issues with this release is maintained in the knowledge base, click [here](#) for more information.

Fixes and improvements

The following fixes and minor improvements are included in this version of Hub.

Area	Description of Change	Reference
Authentication Server	<p>Improvements have been made to the authentication process to increase the resilience of the Hub application. These changes involve the retry mechanism that operates if the Authentication Server becomes unavailable.</p> <ul style="list-style-type: none"> • A 15 minute retry timeout has been added to the authentication process. This allows more time to authenticate if the Authentication Server becomes temporarily unavailable. • The retry mechanism now includes a delay between each retry attempt, starting at three seconds and increasing to 15 seconds. Previously, there was no delay between attempts, and the authentication process failed after five retries. 	HUB-7194

Secure development policy

SS&C Blue Prism’s secure development process is a market-leading, embedded security culture, focused on delivering security excellence through four key principles:

- Education – Providing up-to-date knowledge, information, and training to the development team.
- Evaluation – Regular reviews of our products using industry standard frameworks and security tools.
- Elimination – Remove potential threats through the evaluation of standards, compliance, and performance.
- Evolution – Continued improvement of our security program, ensuring alignment with our product technologies and by reacting effectively to new and emerging threats.

SS&C Blue Prism secure development is based on OWASP ASVS, ISO 27034 and GDPR Article 25 standards and practices. For more information, see SS&C Blue Prism's [comprehensive secure development process](#).

Previous Releases

Hub 5.0 – July 2023

This release note is for the 5.0 release of Blue Prism Hub. For release notes related to the plugins, see:

- [Blue Prism Automation Lifecycle Management 5.0 release notes.](#)
- [Blue Prism Decision 5.0 release notes.](#)
- [Blue Prism Hub Control Room 5.0 release notes.](#)
- [Blue Prism Interact 5.0 release notes.](#)

 SS&C | Blue Prism Hub 5.0 is only available in Blue Prism Cloud – it is not available as an on-premises solution. Please refer to the [roadmap](#) for more information on the planned versions of the Blue Prism Hub platform and the plugins.

Known issues

A list of any prominent issues with this release is maintained in the knowledge base, click [here](#) for more information.

Removal of the dependency between Hub and its plugins

Version 5.0 brings a fundamental change to the relationship between the individual plugins and Blue Prism Hub. Although Blue Prism Hub will continue to host the plugins, changes have been made to remove or reduce the level of dependency, with the view to enable installing and upgrading of future plugins without the need to upgrade the whole of Hub 5.0 and the other plugins.

For more information, see the [Blue Prism Hub release notes](#).

Description of Change	Reference
The Business process component has been removed. For more information on the impact, see the ALM (Automation Lifecycle Management) release notes and the Interact release notes.	HUB-3216 HUB-3171 HUB-3176 HUB-4087 HUB-3845 HUB-3846 HUB-3217 HUB-3179 HUB-3188
The Refresh button has been removed from the tiles on the Environment page. Work queues are now automatically retrieved from the database.	HUB-3669

Description of Change	Reference
<p>The following updates have been made to warning messages when users attempt to delete an environment.</p> <ul style="list-style-type: none"> • To help users understand the risks of deleting an environment from the Environment management page, a warning message now displays when a user attempts this action. The warning contains a link to the relevant online documentation so that users can read the instructions on how to safely delete an environment (database connection). • In the ALM plugin, if any steps in a process definition document are corrupted as a result of the environment being deleted, the corrupted steps are indicated by an orange box around them on the Edit definition page, and a warning message displays at the top of the process definition document to inform users that the indicated steps need to be updated. Each affected step must be updated for the user to be able to save the process definition. • A notification is sent to Interact form members when an environment is deleted, to inform them that they need to update the delivery method of any forms that originally had Queue selected as the delivery message, as they will no longer be able to access the environment database. • Forms in the Interact web application that are related to the deleted environment are hidden on the Interact Home page. • In the Interact web application, if a submission is declined due to the environment being deleted, hovering over the Declined button displays a tooltip that explains that the environment has been removed. 	<p>HUB-3918 HUB-4189 HUB-4113 HUB-3921 INTER-309 INTER-310</p>
<p>The following features and options have been removed from the Plugins management page and Plugins page as they are not available in Blue Prism Cloud:</p> <ul style="list-style-type: none"> • The Add plugin and Update all options have been removed from the Plugin management page. • Access to the Updates page has been removed from the Plugins management page. • The Download option has been removed from the Plugins page. • The limit on the number of users has been removed when uploading an ALM license. • The Uplift license option has been removed for the ALM plugin. • The option to select multiple plugins from a single category has been removed from the Plugins page. <p>Categories have been renamed and now correspond to the side menu options on the Plugins page. As a result, filter options have been removed, and the overview description for each plugin is now displayed when the user clicks each plugin tile on the Plugins page. Each plugin overview page contains a link to the online documentation for that plugin.</p>	<p>HUB-3513 HUB-4586 HUB-4421 HUB-4791</p>
<p>Customization has been moved from the Hub Settings to the Interact plugin. For more information, see the Interact release notes.</p>	<p>HUB-4241</p>

Description of Change	Reference
<p>Hub no longer has a single database. Most of the individual plugins now have their own database. This affects how the system retrieves data for filters. The resulting changes are listed below:</p> <ul style="list-style-type: none"> • The Interact Forms filter has been removed from the filter options on the Roles and permissions page, because the Interact Forms data is no longer stored in the Hub database. • Environment and Queue filters have been added to Create form page in the Interact plugin. • The Owner filter option on the Applications overview page in ALM has been updated from free text to a field where users can start typing to automatically display a list of matching options. 	<p>HUB-4250 HUB-4110 HUB-3926</p>
<p>Widgets are now independent from the dashboard itself, and it is possible for the dashboard and widgets to have different versions of core dependencies.</p>	<p>HUB-2305</p>
<p>A single log out (SLO) feature has been implemented to ensure that when users are logged out from one of the applications (Interact or Hub), the session is ended for both of them. This is to ensure that the functionality is the same as it was in Hub 4.7, before the dependency was removed between Hub and its plugins in 5.0.</p>	<p>HUB-5278</p>
<p>A retry policy has been implemented to dashboard widget registration, so that any plugin with widgets can now be started even if the dashboard service is temporarily unavailable.</p>	<p>HUB-5683</p>

Further enhancements

The following new features and enhancements are introduced in this version of Hub.

Area	Description of Change	Reference
Audit	<p>The following enhancements have been made to the categories and events on the Audit page:</p> <ul style="list-style-type: none"> • Business process (legacy) category – This category is now a legacy category and labeled as such along with the underlying events. For more information, see Removal of the dependency between Hub and its plugins on page 5. • Interact submissions category (only applicable if Interact is installed): <ul style="list-style-type: none"> • Form status changed (via API) – This new event captures the required audit information when a form status has been updated by the Interact Remote API. • Category and Event filter options related to the removed Business process plugin are now appended with the word legacy in the Audit filter list. 	<p>HUB-1662 HUB-3188</p>

Area	Description of Change	Reference
Hub roles and permissions	A change has been made to the way that plugins recognize user roles, to ensure that there are no issues now that the dependency has been removed between Hub and the individual plugins.	HUB-4253
	An administrator can now load a new plugin license that contains a plugin name, and can then view and select that plugin name in the Add plugin list on the Create role page.	HUB-3562
	A change has been made to the way validation works in Hub now that the dependency between Hub and the individual plugins has been removed. This ensures that Hub users are still restricted to using the plugins that have been selected for their assigned role, and also ensures that users with the Hub Administrator role continue to automatically access all available plugins in Hub.	HUB-3563 HUB-3564
	Users are now routed through a gateway, so that all available plugins and services are provided based on users' authenticated privileges.	HUB-1800
Plugin management	Blue Prism Director has been added to the Plugin management page. For more details on this plugin, see the Director release notes .	HUB-4527 HUB-4731
Registrations	If Interact is installed and available, administrators can now select permissions and a theme on the Registrations page in Hub.	HUB-4503
Users	It is no longer possible to create a Hub user with access to the Interact plugin unless Interact is installed and available. The Theme field and Interact role permission field on the Add user and Edit user pages are now only enabled if Interact is available.	HUB-4240
General	All links to the online documentation in Hub now open in a new browser tab.	HUB-4137
	A new tooltip component has been implemented across Hub to ensure all tooltips display correctly across Hub and the plugins.	HUB-2054
	A new plugin discovery service has been implemented to register new plugins installed on the system, and to return a list of available plugins to users based on permissions and license restrictions.	HUB-1853
	An Archived notifications page has been added to Hub, accessed through the notifications menu.	HUB-2834

Fixes and improvements

The following fixes and minor improvements are included in this version of Hub.

Area	Description of Change	Reference
Email configuration	The Send email field in the audit log for SMTP events has been updated to Sender email , to match the same field on the Email configuration page.	HUB-4822
General	Validation has been implemented on the server side to reduce the risk of a stored cross-site scripting attack, which was a potential security risk without the added validation.	HUB-4891

Secure development policy

SS&C Blue Prism's secure development process is a market-leading, embedded security culture, focused on delivering security excellence through four key principles:

- Education – Providing up-to-date knowledge, information, and training to the development team.
- Evaluation – Regular reviews of our products using industry standard frameworks and security tools.
- Elimination – Remove potential threats through the evaluation of standards, compliance, and performance.
- Evolution – Continued improvement of our security program, ensuring alignment with our product technologies and by reacting effectively to new and emerging threats.

SS&C Blue Prism secure development is based on OWASP ASVS, ISO 27034 and GDPR Article 25 standards and practices. For more information, see SS&C Blue Prism's [comprehensive secure development process](#).
